CABLE LADDER

Modern Metal Cable Ladder, a robust cable management system engineered for the structured support, routing, and protection of electrical and data cables in industrial, commercial, and utility-scale installations. Constructed from high-grade galvanized steel, stainless steel, or aluminum, it features two longitudinal side rails interconnected by uniformly spaced transverse rungs. This open-rung design ensures optimal ventilation, simplifies cable installation and inspection, and accommodates high-capacity cable l oads with minimal sag and deflection.

Our products comply with the most well-known International standards: NEMA VE-1, BS EN ISO 1461; G.I. to BS2989, Cold Rolled to BS 2994 1976, Galvanizing to BS 729 or ASTM 123.

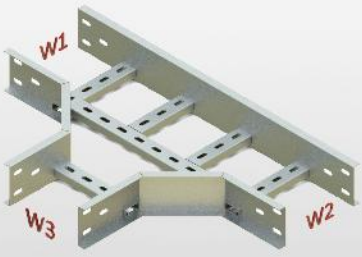

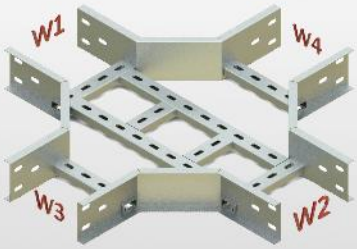

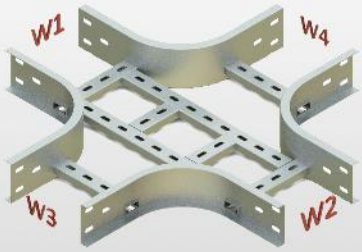

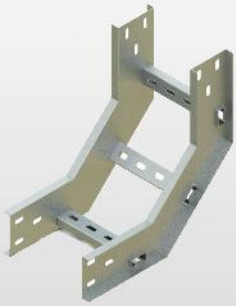

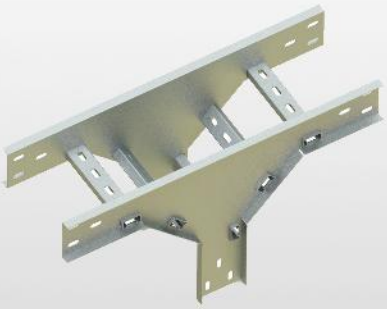

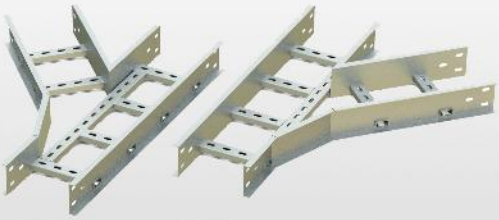

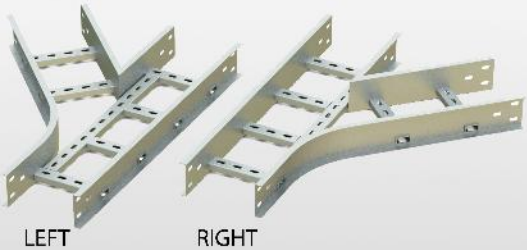

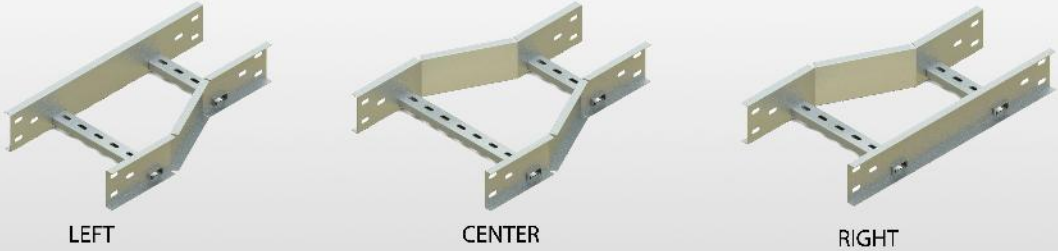

STANDARD SIZES (mm) *Special sizes can be manufactured upon request.

WIDTH:	•100 •150 •200 •300 •400 •500 •600 •700 •800 •900 •1000
HEIGHT:	•75 •100 •125 •150
THICKNESS:	•1.5 •1.8 •2.0 •2.3
LENGTH:	•2440 •3000

CABLE LADDER FITTINGS

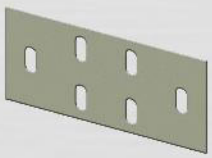

Cable ladder fittings are the modular components designed to connect, support, or transition sections of cable ladders in order to accommodate changes in direction, elevation, or cable routing pathways. These fittings ensure mechanical stability, continuity, and flexibility in cable management systems.

ACCESSORIES & SUPPORTS SYSTEM

An essential range of components designed to complement and enhance cable ladder installations. Engineered for durability and easy installation, these accessories provide structural stability, load distribution, and protection, enabling customized solutions for industrial, commercial, and infrastructure projects.
